

SAP Configuration Agent

User Guide

For Functional Consultants

Version 1.0 · September 2026

1. What Is the SAP Configuration Agent?

The SAP Configuration Agent is a desktop tool that helps functional consultants prepare and manage configuration templates for SAP S/4HANA Cloud Public Edition implementation projects.

Instead of manually navigating SAP to download and fill configuration spreadsheets, the tool:

- Automatically downloads the real configuration templates directly from your SAP system
- Manages PATH 1 activities (Upload Business Configuration — Excel-based configuration)
- Manages PATH 2 activities (IMG/Configuration via browser automation)
- Tracks which activities are complete, pending, or need attention
- Deploys filled templates back to SAP in one click

The tool runs entirely on your laptop. No data is sent to any external server — all activity happens between your machine and your SAP system.

2. Starting the Application

1. Double-click "Start SAP Config Agent.bat"

Located in the SAP Config Agent folder on your machine.

2. Wait for the browser to open

Your browser opens automatically at <http://127.0.0.1:8000> showing the Projects dashboard.

3. Keep the server window open

A terminal window titled "SAP Config Agent Server" opens in the background. Keep it open while working — closing it stops the tool.

Figure 1 — Projects dashboard showing all active projects and brain statistics

The four tiles at the top show the brain statistics — how many SAP activities and scope IDs are pre-loaded. These numbers should appear within a few seconds of opening the app.

3. Creating a New Project

Each implementation engagement is managed as a separate project. A project groups your scope IDs, activities, and templates together.

1. Click "+ New Project"

The button appears in the top-right of the dashboard and also in the projects table.

2. Fill in the project details:

Project Name — A descriptive name (e.g. "Acme Corp S/4 Implementation")

Namespace — A short identifier with no spaces (e.g. "acme-s4"). Used internally.

Scope IDs — The SAP scope IDs for your project (e.g. J45, BD6). Add one at a time and press Enter or click Add.

3. Click "Create Project"

The project is created and you are taken directly to the Plan phase.

The screenshot shows the 'Create New Project' form within the SAP Configuration Agent interface. The header bar is dark blue with the SAP Configuration Agent logo, a 'DEVELOPMENT' badge, and navigation links for 'Projects', 'Brain Status', and a '+ New Project' button. The form itself is a light gray box with the title 'Create New Project'. It contains three input fields: 'Project Name' with the value 'My SAP Configuration', 'Namespace' with the value 'accenture-client-abc', and 'Scope IDs' with the value 'J62, J45, BD9'. Below the 'Scope IDs' field is a small note: 'Comma-separated, e.g. "J62, J45, BD9"'. At the bottom of the form are two buttons: 'Cancel' and 'Create Project'.

Figure 2 — New Project form

4. Plan Phase

The Plan phase loads all SAP activities for your chosen scope IDs from the brain database. You review the activity list, remove any that are not in scope, and finalise the plan before moving to Prepare.

Figure 3 — Plan phase showing activities organised by segment

4.1 Understanding Segments

Activities are grouped into segments — each segment is an Area / Sub-area combination (e.g. Finance / Accounts Payable). When you set up your project, add one segment per functional area you are configuring.

4.2 Reviewing Activities

The activity list shows all implementation activities for each segment. Each row shows:

- Activity Name — the official SAP activity name
- Path — PATH 1 (Excel upload) or PATH 2 (IMG / browser-based)
- Category — Finance, Logistics, etc.

TIP

Use the "Optional" toggle to include optional activities. By default only mandatory activities are shown. If your project requires optional activities, enable them before finalising the plan.

4.3 Finalising the Plan

Once you are satisfied with the activity list, click "Finalise Plan →" at the bottom of the page. This locks the activity list and moves the project to the Prepare phase.

5. Prepare Phase

The Prepare phase is where templates are downloaded from SAP and filled in. There are three steps: connect to SAP, download templates, and upload filled templates.

Figure 4 — Prepare phase with the SAP Connection panel on the left

5.1 Connecting to SAP

Before downloading templates, you must connect the tool to your SAP system. This opens Chrome and lets you log in using your normal SAP credentials.

1. Enter your SAP URL in the "SAP URL" field

This is the URL you normally use to open your SAP Fiori Launchpad, e.g.
`https://myXXXXXXX.s4hana.ondemand.com`

2. Click "Connect to SAP"

A Chrome browser window opens and navigates to your SAP URL automatically.

3. Log in to SAP in the Chrome window

Use your normal SAP IDP credentials — the same username and password you use to log into SAP every day.

4. Wait for the tool to detect your login

The app polls for the SAP Fiori shell. Once it detects you are logged in, the panel updates to show "Connected" in green and the "Download Templates from SAP" button appears.

NOTE You have 5 minutes to complete the SAP login. If you take longer, the connection attempt times out — just click "Connect to SAP" again to retry.

5.2 Downloading Templates from SAP

Once connected, click "Download Templates from SAP" to fetch the real Excel configuration templates for all PATH 1 activities in your project.

Connect to SAP					
Template Source					
Brain Cache	Validated — labels confirmed correct				
Training Data	Unverified — review labels before upload				
		Define Clearing Accounts for Receiving Ban...	Finance / Accounts Payable	Training Data	PENDING
		Define Assignment Keys	Finance / Accounts Payable	—	PENDING
		Define Branch Assignment for Automatic P...	Finance / Accounts Payable	—	PENDING
		Activate Payment Requisition	Finance / Accounts Payable	Training Data	PENDING
		Define Number Range for Payment Requi...	Finance / Accounts Payable	Training Data	PENDING
		Define Tolerances for Customers and Suppl...	Finance / Accounts Payable	Training Data	PENDING
		Set Up All Company Codes for Payment Tra...	Finance / Accounts Payable	Training Data	PENDING
		Set Up Paying Company Codes for Paymen...	Finance / Accounts Payable	Training Data	PENDING
		Check Payment Block Reason	Finance / Accounts Payable	—	PENDING
		Define Minority Indicators	Finance / Accounts Payable	—	PENDING
		Maintain Terms of Payment	Finance / Accounts Payable	Training Data	PENDING

Figure 5 — Prepare phase activity table showing template source badges and download buttons

The download progress is shown in real time:

- A progress bar shows how many of the total activities have been processed
- Each activity row updates as its template is downloaded
- "Brain Cache" badge (green) — template was retrieved from the pre-populated cache instantly
- "Training Data" badge (amber) — template was generated from training data; review before uploading

When all downloads complete, a ZIP file containing all templates is automatically saved to your Downloads folder.

TIP	Do not close the Chrome window during the download. The tool is driving it to navigate each activity and export the template. The Chrome window closes automatically when done.
------------	---

5.3 Downloading a Single Template

You can also download templates one at a time. In the activity table, click "Get from SAP" in the Download column for any individual PATH 1 activity. The template downloads directly to your browser.

5.4 Uploading Filled Templates

After filling in a configuration template in Excel:

1. Click "Upload" in the "Upload Filled" column for that activity
2. Select the filled Excel file from your computer
3. The activity status updates to "Uploaded"

5.5 Template Source Badges

Each PATH 2 activity shows one of two source badges:

Badge	Meaning
Brain Cache	The template has been validated by another consultant against a real SAP system. The field labels are confirmed correct. Safe to use without review.

Badge	Meaning
Training Data	The template was generated from SAP training data. Review the field labels by clicking "Edit Labels" and comparing against the actual activity in your SAP system before uploading values.

6. Realize Phase

The Realize phase is where templates are deployed to SAP. Once all templates have been filled and uploaded in the Prepare phase, you move to Realize to push the configuration values into the SAP system.

Figure 6 — Realize phase showing activity statuses and deployment controls

The activity table shows the status of each activity:

- Pending — not yet processed
- Uploaded — template has been filled and uploaded, ready to deploy
- Done — successfully deployed to SAP
- Failed — deployment failed; see the error message for details

7. Brain Status (Advanced)

The Brain Status page (accessible from the top navigation bar) shows the pre-loaded activity knowledge base. Most consultants do not need to use this page day-to-day.

Figure 7 — Brain Status page showing coverage statistics and cached templates

The brain contains the definitions for all 4,233 SAP activities (1,306 PATH 1 and 2,927 PATH 2) across 774 scope IDs. When a template has been downloaded from SAP and validated, it is stored in the brain so that future projects with the same activity can retrieve it instantly — without connecting to SAP again.

8. Tips & Frequently Asked Questions

Can I use the tool without an internet connection?

Yes. Once set up, the tool runs entirely offline. It only needs internet access during initial setup (to download Python packages).

What if I cannot connect to SAP?

Check that your SAP URL is correct and that you can open it in a normal browser. The URL should be the Fiori Launchpad URL (the one you bookmark to open SAP every day). If you are on a VPN, make sure the VPN is connected first.

The Chrome window opened but nothing happened — what do I do?

Log in to SAP in the Chrome window as normal. The tool is waiting for you to complete the login. Once the SAP home screen (Fiori Launchpad) appears, the tool detects it automatically within a few seconds.

A template shows "Not in this SAP system" — what does that mean?

This means the IMG activity node for that template is not activated in your specific SAP tenant. This is normal — not all activities are available in all tenants. These activities are skipped during the batch download and are shown with an amber badge.

Can I download templates for just one activity?

Yes. In the Prepare phase activity table, click "Get from SAP" on the specific row instead of using the "Download Templates from SAP" button on the left panel.

How do I stop the tool?

Close the terminal window titled "SAP Config Agent Server". The browser tab will stop working. To restart, double-click "Start SAP Config Agent.bat" again.

9. Support

For questions about using the tool, contact your implementation lead.

For SAP access issues (login, URL, permissions), contact your SAP system administrator.
